Low as the Market Affords AT SELECTION OF THE PARTY OF TH Billing Party by R. B. Start, 100 from the ConPICKLED CARRAGE.—In response to the inquiry, "hew to pickle cabbego," a few weeks slice, I send the following, which our people have tried several years, and I know to be good, and is liked by those who have eaten of it. It keeps well a year, and how mpch longer it would keep I an unable to say. If one is not over nice in regard to the form in which it beserved, I think it will suit the palate of any who are fond of the like pickle. Take any quantity of well-formed cabbage heads, and thick meated squasit, or bell prepers, and chop them time shift mix. Use about one third pepter and two-thirds or more of cabbage after chopped; for sach gallon take one heaping tablespoonful of ground cloves, about half the quantity of ground cloves, about half the quantity of ground cloves, about half the particular of ground cloves, about half the quantity of ground cloves, about naif two tablespoonfuls of fine salt; mix thoroughly and place it in a stone far, and pour over it stadding hot cider vinegar; cover and set in the store-room, where it will keep rool and not freeze. It will answer to use after twenty-four't bdurs. Small green tomaticator other 'regetables may be added, if desired, and pickled whole. One who does not ill-colote at the trouble of stuffing peppers, will here find an excellent substitute. The vinegar should not rise above the cabbage, only well raturate the mass. Try it, and if you do not like it let me know of a better way.

Using Hentlement.

Using the property of Deorgi.
A neighbor recently expressed his great entries at the position of a accidental experiment which he had performed this season. The country, it is well known, has suffered severely in Some places for a want of rulo, and the result was therefore the more striking. He planted a small field with potatoes, one row of which was immediately over an underdrain. Here he expected to find the soil the driest, and the potatoea burnt up for want of moisture. He found exactly the reverse—this raw yielding about double the others. The drain had prevented the soil from becoming waterscaked, in spring and from baking hard in summer, and had kept it loose and porous. The increased depth to which it had been worked in digging the ditch, that saided to the increase of the ctop. This, was a simple and convincing experiment of the combined advantages of subsoiling and draining.
